73, Bùi Thị He, xã Tân An Hội, TP Hồ Chí Minh

Software Engineering graduate with 2 years of hands-on experience building full-stack applications across the React and modern backend ecosystems. Passionate about clean architecture, performance optimization, and reliable CI/CD pipelines. Adept at leveraging Spec-Driven Development (SDD) and AI-assisted workflows to accelerate delivery of robust, scalable products.

EDUCATION

FPT University | 05/2023 - 05/2026
Bachelor - Software Engineer

- **GPA:** 7.48 / 10
- **Degree Classification:** Good
- **Capstone Project:** Lowca - HCM Digitalized Street Food Application

FOREIGN LANGUAGE

English: Intermediate

SKILL

- **Languages:** JavaScript, TypeScript, Python, HTML5, CSS3.
- **Core Skills:** OOP, Data Structure
- **Frontend:** ReactJS, React Native, Redux Toolkit, React Query, React Router, Axios, Websocket, TailwindCSS, Vite, Material UI (MUI), Bootstrap, Zod, React Hook Form.
- **Backend & DB:** Node.js, Django, RESTful API, Express.js, Hono.js, , PostgreSQL, MongoDB, JWT
- **Tools & DevOps:** Git & GitHub, GitHub Actions, Postman, OpenAPI, AWS S3, Bun, npm, Figma, Fly.io, Vercel.

FEATURED PROJECTS & WORK EXPERIENCE

Amazing Tech - OJT
Frontend Developer
01/2025 - 08/2025

Nghia Ad Web Application (Dynamic CMS Platform)

Project Description: A dynamic Content Management System (CMS) platform enabling corporate clients to customize and modify website content directly.
Tech Stack: ReactJS, Vite, Redux, Quill Rich Text Editor, RESTful APIs.
Core Responsibilities:

- Built the core frontend modules and structural layouts from scratch, ensuring predictable global state management using Redux.
- Robustly integrated complex RESTful API endpoints from the backend to ensure smooth data synchronization.

Experiential Entrepreneurship Project
Backend developer
09/2025 - 12/2025

Trading Card Game Application

Github: https://github.com/PTan2505/tcg_be.git
Project Description: A backend system for a comprehensive TCG platform that allows hobbyists to catalog personal collections, securely trade items, and interact through a social feed to showcase rare cards or share gaming experiences from popular franchises (Pokémon, Yu-Gi-Oh!, One Piece).
Tech Stack: Node.js, Hono, MongoDB, Mongoose, RESTful APIs, JWT, Agenda.js, Google OCR.
Core Responsibilities:

- Independently designed the entire MongoDB/Mongoose schema and solo-implemented all RESTful APIs using Hono for ultra-low latency.
- Engineered dynamic structures for custom deck-building, user collection tracking, and diverse card management (Pokémon & Yu-Gi-Oh!).
- Integrated Google OCR to automate card text recognition from images and built an advanced query engine for multi-criteria filtering.
- Implemented JWT authentication, enforced API rate-limiting protection, and provided interactive Swagger documentation.

Capstone Project
Frontend Team Lead (Web & Mobile)
12/2025 - 05/2026

Lowca - HCM Digitalized Street Food Application

Github:

- **Web:** https://github.com/PTan2505/HCM-Digitalized-Street-Food-FE-Web.git
- **Mobile:** https://github.com/PTan2505/HCM-Digitalized-Street-Food-FE-Mobile.git

Project Description: A comprehensive digital discovery and review ecosystem tailored for Ho Chi Minh City's street food vendors and customers. A "Discovery & Social Proof" platform for HCM City's street food ecosystem, featuring a "Pay First, Eat Later" flow, integrated wallets, and gamification mechanics.

Tech Stack: Bun, Redux, React Query, SignalR (WebSocket), PayOS, OpenMapVn, AWS S3 Bucket, Google OAUth, Meta OAuth.

- **Web:** ReactJS & Vite
- **Mobile**: React Native & Expo

Core Responsibilities:

- Implemented secure authentication and Role-Based Access Control (RBAC) by integrating Google and Meta OAuth, implementing cross-platform token management, and handling silent refresh token logic upon expiration to ensure uninterrupted user sessions.
- Independently architected and developed the entire cross-platform Mobile application using React Native and Expo from scratch.
- Led a 3-developer frontend team to architect and build both Web and Mobile platforms from the ground up.
- Designed a dynamic weighted ranking algorithm and multi-layered search logic that prioritizes store name matches over dish names.
- Utilized React Query caching mechanisms to eliminate UI blocking and rendering overhead across platforms.
- Engineered automated GitHub Actions workflows to enforce code quality standards by validating formatting and linting compliance, blocking non-compliant code, and leveraging EAS Build for automated cross-platform Mobile distribution.

Personal Project
Fullstack developer
08/2024 - Now

Clinic Management Application (Backend)

Github: https://github.com/khanhqnguyen0209/clinic_management_be.git

Project Description: A backend system designed to streamline clinical workflows, automate patient record management, and optimize appointment scheduling for healthcare providers.

Tech Stack:

- **Frontend (In Progress):** ReactJS, Vite, TailwindCSS, MUI, Axios, TanStack React Query.
- **Backend:** Python, Django, PostgreSQL, RESTful APIs, PyOTP.

Core Responsibilities:

- Architected a robust relational database schema in PostgreSQL, ensuring data integrity, strict constraints, and optimized indexing for complex healthcare data.
- Implemented core business logic for appointment booking, medical billing generation, and secure electronic health record (EHR) management.
- Developed a secure authorization system and Multi-Factor Authentication (MFA) using PyOTP to differentiate permissions between doctors, nurses, receptionists, and patients.
- Initiated and developed the companion frontend web application, building responsive layouts and connecting core RESTful APIs for user authentication and patient workflows.
- Engineered automated GitHub Actions workflows to enforce code quality standards by validating formatting and linting compliance, blocking non-compliant code
